

Introducing two new low carbon transmission technologies

This years Low Carbon Vehicle Event September 10th – 11th was the perfect opportunity for us to showcase our latest innovations in electric and hybrid power-train technologies.

The annual event is the UK's Premier Low Carbon Vehicle event incorporating a technology exhibition, conference program and test drive opportunities.

Five things you need to know before Going Ultra Low...

So far this year, more ultra-low emission vehicles (ULEVs) have been registered than ever before, with 59% more people choosing pure electric and plug-in hybrid cars than in 2013. The success of the UK's lowest-emitting vehicles is thanks, in part, to Go Ultra Low, a joint industry and government campaign to educate motorists on the benefits of ULEVs.

A ULEV is defined as emitting no more than 75g/km CO₂ from the tailpipe.

For comprehensive details on ultra-low emission vehicles, go to GoUltraLow.com, but in the meantime, here are five figures that help summarise what they're all about.
