

Software and Control

Sienall Software Platform

Turn Key

Full lifecycle offering for transmission and driveline control software

Applications

- Complex transmission systems
- Active differential control
- Hybrid and electric vehicle
- HiL and SiL development environments

Quality

Software driven by accredited ISO90001 quality system

Functional Safety

To automotive best practice, ISO26262

Case Studies

Series production 7-speed DCT. Complete application and calibration

Series production 7-speed AMT. Complete application and calibration

Single software module functions integrated into OEM software

Demonstrator vehicle application for novel control of multi-speed Electric Vehicle transmissions

Demonstrator vehicle application for OGeco Dedicated Hybrid Transmission, including hybrid control strategies

inspire • innovate • drive
